

Automotive industry: containers developed for just-in-time distribution of components (Odette 20 kg containers and Galia containers).

The automotive standard

Stable and secure when palletised (lid ref. 06999).

- Guarantee of an approved and standardised range defined by automotive constructors and component manufacturers with the participation of Allibert Buckhorn.
- Range consists of 5 Odette modular containers with lids, a long Galia container and a palletised load

cover allowing another palletised load to be stacked on top.

- Maximum rigidity for the protection of delicate parts.
- Soft colours for a pleasant working environment.
- Reusable containers eliminate the costly expense of disposable packaging.

THE BENEFITS

- 8 robot handling positions.
- Specified colours and tares.
- Modular sizes; all models
- 15 mm recess for safe and secure stacking.
- Integrated label holders

Automotive industry: reusable packaging suitable for rapid just-in-time rotation (Odette 20kg containers).

Automotive industry: protection of cabin wiring harness delivered in long Galia containers (ref. 01315).

Easy access to component parts while keeping the production line clear of obstruction (Odette 20kg containers).
